

Gravity Indicator

4th Dimension's Gravity indicator seeks to isolate the price at which the market is most likely to return to across several different time periods. The more the price lines are in congruence the stronger the support or resistance. In addition, the higher the time frame lookback Gravity, the more likely the level will hold from attack above or below. The study has four outputs which can be turned on or off including:

- Short Term Gravity
- Medium Term Gravity
- Long Term Gravity
- User defined Gravity (Days)

Within the Set-Up parameters the user can modify the user defined Gravity by adjusting the number of Days.
